Věc/*Subject*: **Statement.**

In last few years there has been proceeding reconstructions of railway corridors in Czech republic. Projects contains deliveries of many advanced technologies. With relation to these reconstructions, Czech railways (ČD) announced in 1998 a tender for rolling stock diagnostic system delivery. The tender won company STARMON which represents company TENS (the manufacturer of diagnostic system ASDEK) in Czech republic.

There were installed totally 6 ASDEK's on ČD railway net. The first ASDEK was set off in 1998 in Zámorsk railway station. After one year successful verifying operation the system was approved. Now this first system works in Pardubice-Kostěnice station (where it was replaced after verifying operation in Zámorsk) already six years without any serious defects.

After this good experiences and with unity of Czech railways strategy (raising safety during passengers and freight transport) decided to equip their railway net by another 5 ASDEK's. These 5 systems were installed in Ústí nad Labem, Pardubice-Opočíněk, Brno, Hranice na Moravě and Přerov. Works started on November 2002 and finished on June 2003. Each system includes Hot box, Hot wheel and Wheel Flat Detectors.

Works started on November 2002 and they were completed on time without any remarks on June 2003. Installations has been processed with cooperation with TENS Sp. z o.o., who has been providing the delivery and final system start-up. The value of delivery reached about 989 000 EUR.
